

STAR BOND STARCRETE

ACRYLIC ADMIXTURE FOR WATERPROOFING

STARCRETE is a white liquid Acrylic Polymer admixture blended with plasticisers and selected fillers. for waterproof coating, bonding agent, when diluted it produces a gauging solution for improving cementitious mixes. When it is used with combinations with standard quality of ordinary Portland cement, it improves the mechanical properties such as bonding (adhesion) with various building materials, flexural, compression and impact strength.

Features / Benefits

- ❖ Starcrete is easily mixed with cement, cures to hard, tough, weather resistant surface & bonds strongly to most of the building materials.
- ❖ It can be over coated by exterior emulsion base coating or cement based paints.
- ❖ It can be applied to uniform thickness coating on both the horizontal and vertical surfaces.
- ❖ It allows trapped water vapour to inhibit and prevents blistering and adhesion failure.
- ❖ It is unaffected by UV light and prevents discoloration of concrete and corrosion in steel due to its alkali nature.
- ❖ It is non-flammable.non-hazardous

Area of Application : Waterproofing of building terrace, basements, swimming pools, toilet sunken portion, bridge decks, traffic aprons, runway, parking garages, industrial or factory floor, balconies, side walls, pools and foundation. repairing of concrete & masonry walls - internal, external and terrace roofs by cement mortars.
